Additional Notes: Urban Anthropology. 3 hours. As more of the world's population settles in cities, anthropologists have increasingly shifted their sites of study from rural to urban settings. Despite this new geographic focus, it remains debatable whether anthropological studies merely take place in urban settings or are of the city. Our goal in this class is to question how anthropological insights and methods might contribute to our understandings of urban phenomena. In order to do so, we will ask the following big questions: (1) What is a city? What sort of conditions produced this spatial category in different parts of the world throughout history? (2) How did the industrial revolution reshape the city and structure contemporary notions of spatial planning, social engineering and capitalist production? (3) What is the future of the city in the postmodern, post-industrial and post-national global era? Will future cities reduce or exacerbate social and economic inequality? (4) How have social and economic histories shaped the layout and structure of contemporary Denton and Dallas? Students will be asked to apply course material to their own ethnographic projects.
